#### **Text tools**

### cat - concatenate files and print

```
eureka@ubuntu:~$ cat test file
                                         eureka@ubuntu:~$ cat < test file
day, city, host
                                         day, city, host
1, CHI*, b
                                         1, CHI*, b
2, LON, c
                                         2,LON,C
3, TOK, a
                                         3, TOK, a
2, CHI*, C
                                         2, CHI*, C
3,CHI,a
                                         3, CHI, a
2,LON,b
                                         2,LON,b
4, SAO, a
                                         4, SAO, a
```

# Create a new file named new\_test\_file and add text

```
eureka@ubuntu:~/Desktop$ cat > new_test_file
hello I'm a test file
Ctrl + d
eureka@ubuntu:~/Desktop$ cat new_test_file
hello I'm a test file
```

#### tac- concatenate and print files in reverse

```
eureka@ubuntu:~$ tac test_file
4,SAO,a
2,LON,b
3,CHI,a
2,CHI*,c
3,TOK,a
2,LON,c
1,CHI*,b
day,city,host
```

### echo - display output

- -n no trailing newline
- -e interpret backslash escapes

```
eureka@ubuntu:~$ echo "hello\nworld"
hello\nworld
eureka@ubuntu:~$ echo -e "hello\nworld"
hello
world
eureka@ubuntu:~$ echo -en "hello\nworld"
hello
worldeureka@ubuntu:~$
```

# add newline to end of file -> echo >> filename

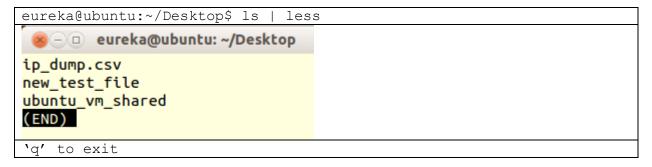

```
eureka@ubuntu:~$ cat new_test_file
hello I'm a test file
eureka@ubuntu:~$ echo "I'm a new line" >> new_test file
eureka@ubuntu:~$ cat new_test_file
hello I'm a test file
I'm a new line
```

printf - print and format

less – view but not change the contents of a file. Nice when you want to read an important file's contents without accidentally fat fingering an edit on the file.

ex: less FILE

pipe commands to less

sort - sort line of text files

- -u unique
- -t file separator
- -k specifies sort field
- -s disables 'last-resort' sorting, which sorts on everything that wasn't part of a specified key
- -n is for sorting numerically

# Sort comma separated file by column 6 and how only unique lines

eureka@ubuntu:~\$ cat test_file	eureka@ubuntu:~\$ sort -u -t, -k1 -s test_file
day,city,host	1,CHI,b
1,CHI,b	2,CHI,c
2,LON,C	2, LON, c
3, TOK, a	3,CHI,a
2,CHI,c	3, TOK, a
3,CHI,a	4, SAO, a
2,LON,C	day,city,host
4,SAO,a	
eureka@ubuntu:~\$ cat test_file	eureka@ubuntu:~\$ sort -u -t, -k1 -s -n test_file
<pre>eureka@ubuntu:~\$ cat test_file day,city,host</pre>	eureka@ubuntu:~\$ sort -u -t, -k1 -s -n test_file day,city,host
_	<u> </u>
day,city,host	day,city,host
day,city,host 1,CHI,b	day, city, host 1, CHI, b
day,city,host 1,CHI,b 2,LON,c	day,city,host 1,CHI,b 2,LON,c
day,city,host 1,CHI,b 2,LON,c 3,TOK,a	day, city, host 1, CHI, b 2, LON, c 3, TOK, a
day, city, host 1, CHI, b 2, LON, c 3, TOK, a 2, CHI, c	day, city, host 1, CHI, b 2, LON, c 3, TOK, a

# find duplicate rows in file

eureka@ubuntu:~\$ cat test_file	eureka@ubuntu:~\$ sort test_file  uniq -d
day,city,host	2, LON, C
1,CHI,b	
2,LON,C	
3, TOK, a	
2,CHI,c	
3,CHI,a	
2,LON,C	
4, SAO, a	

cut - display only specific columns from a text file or other command outputs

- -d delimiter
- -f fields

```
eureka@ubuntu:~$ cat test_file
                                      eureka@ubuntu:~$ cut -d "," -f 1 test_file
day, city, host
                                      day
1,CHI,b
                                      1
                                      2
2,LON,c
3, TOK, a
                                      3
                                      2
2,CHI,c
                                      3
3,CHI,a
                                      2
2,LON,c
                                      4
4,SAO,
```

### Use tab as a delimiter

eureka@ubuntu:~\$ cat test file	eureka@ubuntu:~\$ cut -d " " -f 1 test file	То
day,city,host	day,city,host	input
1,CHI,b	1,CHI,b	tab ->
2,LON,C	2,LON,c	cut -d
3,TOK,a	3, TOK, a	" <ctr>v</ctr>
2,CHI,c	2,CHI,C	<tab>"</tab>
3,CHI,a	3,CHI,a	
2,LON,C	2,LON,c	
4,SAO <mark>, a</mark>	4,SAO,	

# paste - join files horizontally

#### colrm - column remove

```
eureka@ubuntu:~$ cat test file
day, city, host
1, CHI*, b
2,LON,c
3, TOK, a
2, CHI*, C
3,CHI,a
2,LON,b
4,SAO,a
eureka@ubuntu:~$ colrm 3 < test_file</pre>
1,
2,
3,
2,
3,
2,
```

# join - merges the lines of two sorted text files based on the presence of a common field

### expand - convert tab to spaces.

#### -t set tab stops

```
eureka@ubuntu:~$ cat test_file
1    CHI*,b
2    LON,c
3    TOK,a
4    SAO,a
eureka@ubuntu:~$ expand -t 1 test_file
1    CHI*,b
2    LON,c
3    TOK,a
4    SAO,a
```

# unexpand - convert spaces into tabs. Must have at least 2 spaces

# -t set tab stops

```
eureka@ubuntu:~$ cat test_file
1   CHI*,b
2   LON,c
3   TOK,a
4   SAO,a
eureka@ubuntu:~$ unexpand -t 2 test_file
1    CHI*,b
2   LON,c
3   TOK,a
4   SAO,a
```

# grep - searches plain-text data sets for lines matching a regular expression

grep can return exit code 1 even if it ran successfully. 0 means it found something, 1 means it found nothing

### -F disable regex

```
eureka@ubuntu:~$ cat test_file
day,city,host
1,CHI*,b
2,LON,c
3,TOK,a
2,CHI*,c
3,CHI,a
2,LON,b
4,SAO,a
eureka@ubuntu:~$ grep -F "CHI*" test_file
1,CHI*,b
2,CHI*,c

2,CHI*,c
```

```
eureka@ubuntu:~$ cat test_file
day,city,host
1,CHI*,b
2,LON,c
3,TOK,a
2,CHI*,c
3,CHI,a
2,LON,b
4,SAO,a
eureka@ubuntu:~$ grep "CHI\*" test_file
1,CHI*,b
2,CHI*,c
2,CHI*,c
4,SAO,a
```

```
eureka@ubuntu:~$ cat test_file
day,city,host
1,CHI*,b
2,LON,c
3,TOK,a
2,CHI*,c
3,CHI,a
2,LON,b
4,SAO,a
eureka@ubuntu:~$ grep "CHI*" test_file
1,CHI*,b
2,CHI*,c
3,CHI,a
```

#### -H show file name

4, SAO, a

### -n show line number

```
eureka@ubuntu:~$ cat test_file
day,city,host
1,CHI*,b
2,LON,c
3,TOK,a
2,CHI*,c
3,CHI,a
2,LON,b
eureka@ubuntu:~$ grep -Hn '[[:blank:]]' test_file
test_file:6: 2,CHI*,c
test_file:7: 3,CHI,a
2,CHI*,c
2,LON,b
```

# -w matches whole word only

eureka@ubuntu:~\$ cat	eureka@ubuntu:~\$ grep -w	eureka@ubuntu:~\$ grep -w
test_file	CH test_file	CHI test_file
day,city,host	eureka@ubuntu:~\$	1,CHI*,b
1,CHI*,b		2,CHI*,C
2,LON,C		3,CHI,a
3, TOK, a		
2,CHI*,C		
<mark>3,CHI,a</mark>		
2,LON,b		
4,SAO,a		

# -m stop searching after first one is found

```
eureka@ubuntu:~$ cat test_file
day,city,host
1,CHI*,b
2,LON,c
3,TOK,a
2,CHI*,c
3,CHI,a
2,LON,b
4,SAO,a
eureka@ubuntu:~$ grep -m 1 CHI test_file
1,CHI*,b

1,CHI*,b

4,SAO,a
```

# wc - Print Line, Word, and Byte Counts

### -I count lines

```
eureka@ubuntu:~$ wc new_test_file
  6 60 426 new_test_file
eureka@ubuntu:~$ wc -l new_test_file
6 new_test_file
```

tr - Translate/transliterate characters from standard input, writing to standard output. use quoting and/or brackets, as appropriate.

Great article on tr <a href="http://www.linuxjournal.com/article/2563">http://www.linuxjournal.com/article/2563</a>

- -d delete
- -c complement

```
eureka@ubuntu:~$ cat test file
day, city, host
1,CHI,b
2,LON,C
3, TOK, a
2,CHI,c
3,CHI,a
2, LON, c
4,SAO,a
eureka@ubuntu:~$ tr -d '3' < test file > new test
eureka@ubuntu:~$ cat new test
day, city, host
1,CHI,b
2,LON,c
,TOK, a
2,CHI,c
,CHI,a
2,LON,c
4,SAO,a
```

Count how many times \* appears in a text file – notice the escaped `\*'. tr deletes all characters which are not `\*' in the character set

```
eureka@ubuntu:~$ cat test_file
day,city,host
1,CHI*,b
2,LON,c
3,TOK,a
2,CHI*,c
3,CHI,a
2,LON,b
4,SAO,a
eureka@ubuntu:~$ tr -d -c \* < test_file |wc -c
2

eureka@ubuntu:~$ tr -d -c \* < test_file |wc -c
2

eureka@ubuntu:~$ tr -d -c \* < test_file |wc -c
2
