Useful multi-host commands

pdsh - issue commands to groups of hosts in parallel

-f maximum number of simultaneous remote commands to run
-l user
-F read genders information from filename instead of the system default genders
(use genders to define hosts and groups of hosts)
-g target nodes that match any of the specified genders attributes

scp- secure copy (remote file copy program)

-o pass options to ssh in the format used in ssh_config
-v verbose

scp w/ out asking for host checking and only doing 3 ssh at a time

Ex: `pdsh -f 3 -l USER -F /file -g ""group"" ""scp -v -o strichostkeychecking=no host:/home/text.txt""`

dshbak - format output from pdsh command

Ex: `pdsh -g ""group"" s df -h | dshbak -c`
